KIMAX® Glass Funnels

*Funnels' Angle
Encourages
Faster Filtration*

Exclusive 58° angle on liquid funnels promotes more rapid filtration by suspending the standard 60° paper filter cone by its uppermost edges; uses more of the conical area for filtration.

Specifications: *Liquid* funnels have heavy, uniformly thick walls with molded rims, and short fire-polished stems for long service life. High resistance to chemical attack and mechanical and thermal shock. *Powder* funnels have a fire-polished rim with a shorter and wider 1½" L stem.

Polypropylene Funnels

Transfer liquids and powders easily without spills.

Specifications: Unbreakable, chemical-resistant polypropylene. *Liquid Funnels* hold filters securely. Parallel stem on *Powder Funnels* minimizes "bridging" of powder. *Funnel Sets* include two funnels of each size. Liquid and Powder Funnels are both autoclavable. Heat resistant to 275°F/135°C. *Carboy/Drum Funnels* are ideal paired with large containers such as drums. Use for faster pouring and reducing spills. Autoclavable. Heat resistant to 250°F/121°C. Nos. 27890 and 27891 have a handle at the rim.

Insider's Tip

What's the difference between liquid and powder funnels?

Liquid Funnels have a smaller stem opening to reduce splash and dribbling preventing spills and messes.

Powder Funnels have a wide stem opening to allow for better flow.
